ABSTRACT OF THE DISCLOSURE

An <u>example</u> [[A]] communication apparatus <u>is</u> capable of performing communication with <u>an</u> ~~the~~ information server in ~~the~~ first and second communication modes[[,]]<u>. After</u> ~~after~~ establishing a connection with the information server in the first communication mode and receiving ~~at step S101, receives~~ an information acquisition request ~~from the operator (S102)~~, <u>the communication apparatus</u> stores <u>a</u> ~~the~~ condition of <u>the</u> communication connection with the information server ~~at that time~~ as connection information ~~(S104)~~, disconnects the communication in the first communication mode ~~(S105)~~, establishes a connection with the information server in the second communication mode ~~to perform switching of communication mode (S106)~~, and restores the communication connection <u>with the information server</u> ~~condition~~ based on the <u>stored</u> connection information ~~stored when the communication in the first communication mode is disconnected (S107)~~.
